Reverse roller blind (controlled from down to up)

Measurements & mounting

All measurements in mm

Dimension Roller tube	Fittings chain command & motor White, grey or beige plastic	Fittings chain command Stainless steel	Fittings spring r.b. White plastic
 30mm			
 42mm			<p>All fittings can be mounted to the wall or to the ceiling.</p>

Mounting on the wall or ceiling

Measure the distance between the ceiling, or a point on the wall, down to the point where you want the Roller Blind to end. This is your system height.

Measure the width between two points on the wall or in the ceiling. This is your system width. Subtract 5mm from the total width if you want the Roller Blind mounted from wall to wall.

Recess mounting

Measure the total width within the window recess. Subtract 5mm from this measurement and use as system width. The system height should be identical to the recess height.
